

1. Where the annotation can be applied
2. How long the annotation will be available.

Bean LifeCycle

1. Read bean definition
2. Instantiate object
3. Inject dependencies
4. Run aware callbacks
5. Run BeanPostProcessors before initialization
6. Run initialization callbacks
7. Run BeanPostProcessors after initialization
8. Store the final bean reference

Spring Beans are created (StudentService)

Dependencies are injected

initialization (@PostConstruct)

BeanPostProcessor

Does any aspect apply ?

yes

Proxy
(BEAN)

No

Target Object
(BEAN)
